

Pre-Coated Sheathing Technical Bulletin

TB1901

Category: Pre-Coated Sheathing

Keywords: Sheathing, Coated

There are many types of Sheathings that are pre-coated with different products. These coatings have many properties including claims of being a water-resistive barrier. Many of the pre-coated sheathings can be used in Parex USA CI and Stucco systems but the base material must meet ASTM requirements, e.g. glass mat gypsum sheathing conforms to ASTM C1177.

When the pre-coated boards are used in a Stucco or CI system, Parex USA, Inc. does not validate or measure the effectiveness of the coatings or if they meet current building code to resist water/weather. No warranty will be given if used in a Parex USA WaterMaster Series unless a Parex USA Water Resistive Barrier has been used in the system according to current specifications and directions.

Note: Some coatings on the sheathing require the system to be mechanically adhered vs. adhesively adhered. Bond strength when adhesively adhering must be determined by the designer of record for the project and approved by that individual.

If the pre-coated substrate is used in a Parex USA CI or Stucco WaterMaster System, contact Parex USA Technical Services at (800) 226-2424 for more information.
